

Software Risk Assessment

Easily analyze risks associated with your mainframe software products

Streamline your risk management process and minimize negative impacts on mainframe operations by proactively tracking maintenance, lifecycle, expiring certifications, and Broadcom license keys — all from a single dashboard.

What critical areas does Software Risk Assessment address?

PTF Analysis

- What maintenance is available but has not been received yet?
- What maintenance have I received but not deployed?
- What is the risk of not deploying maintenance?

Maintaining products to improve functionality through updates is critical, and manually managing maintenance can be challenging. PTF Analysis automatically prioritizes workload based on the risk of each maintenance item, streamlining the maintenance process, and can be used for all SMP/E installed products, not just Broadcom solutions.

Product Lifecycle

- Is any installed software out of support now?
- Is any installed software nearing end-of-support?

To access up-to-date maintenance, it's important to migrate to newer versions of products that are ending support. The Software Risk Assessment capability provides a solution by retrieving product lifecycle information in real-time, and any mainframe software vendor can participate.

Keyrings and Certificates

- Do I have any expiring keyring tokens in need of renewal?
- Do I know who owns a keyring or certificate?
- Do any CICS TCP/IP services require a certificate?

SSL certificates are vital for securing communication between clients and servers in the API-driven ecosystem. To avoid API call failures, it's crucial to refresh expiring certificates on time. Software Risk Assessment helps by listing keyrings and certificates by proactively displaying their expiration date, allowing you to stay ahead of potential disruptions to prevent negative impacts on your API-driven operations.

Get Started in Minutes:

Software Risk Assessment is included within Mainframe Essentials, a powerful set of tools available to all Broadcom mainframe customers at no additional cost.
