Keep up-to-date on the latest resources, research, and events for DevOps Test Data Manager, Service Virtualization, and Agile Requirements Designer solutions.

DevOps Highlights

2023 Accelerate State of DevOps Report

Broadcom Software is proud to continue to sponsor the Accelerate the State of DevOps Report for 2023, as we did for 2022. More highlights to follow throughout this year.

Continuous Testing Partner Program

Broadcom has established a Continuous Testing Partner Program to enable select partners to deliver customer-facing workshops designed to help customers assess and identify opportunities to improve their testing processes. This partnership is helping many global enterprises in shift-left defect identification, improving delivery and reducing operational costs.
Takeaways from these workshops can help radically improve a customer's software testing life cycle.

Cigniti, a global digital assurance and engineering leader, excels at delivering these customer-value-focused workshops. If you are interested in learning more, contact seshasai.parisaboina@cigniti.com.

Test Data Manager

Using Javelin with Test Data Manager Webinar

February 23, 11:00 am ET
Join Cihan Ankara, Test Data Manager Client Services Consultant as he presents how Javelin can significantly reduce the time to perform Test Data Manager tasks and how to use Javelin as your engine to model workflows and run commands that automate complex data migrations.

Service Virtualization

Using Service Virtualization with the Mainframe Webinar

April 20, 11:00 am ET

Join Beverly Mindle and Karl Miller as they present how Service Virtualization removes constraints by simulating mainframe systems that are constrained, unavailable or being modified. Service Virtualization can either virtualize the mainframe as accessed by distributed systems via HTTP(S), IBM Websphere MQ, IMS Connect Gateway or CICS Transaction Gateway. This allows the customer uninterrupted, stable development and testing of the distributed application and reduced mainframe costs. Service Virtualization can also virtualize within the mainframe allowing for performance testing or parallel development of distributed applications and mainframe services.
