GigaOm Presents:

Key Criteria for End-to-End Network Visibility Across Multi-Cloud

GigaOm Presents: Key Criteria for End-to-End Visibility Across Multi-Cloud

Join GigaOm's research analyst, Andrew Green along with Broadcom for this November 14th webinar as we highlight the key criteria for successful network management strategies for full end-to-end NOC visibility across hybrid network delivery paths like home Wi-Fi, ISP, transit networks, multi-cloud and SaaS. Learn why optimizing network operations leads to accelerated and successful network transformations, while enhancing connected experiences across the entire hybrid and multi-cloud network delivery path.

What's New with AppNeta

New Online Course:

AppNeta: Account Administration Learn how to configure and manage your AppNeta organization in order to control user access to performance monitoring data, manage Monitoring Points connected to your account, and plan appropriate integrations with other tools. [Enroll](#)

Release Note Highlights:

Faster Monitoring Point deletion We have increased the speed at which Monitoring Point deletion policies remove Monitoring Points that match deletion criteria. Up to 600 Monitoring Points can now be removed each day per organization using Monitoring Point deletion policies. [SaaS 16.19]

Navigate AppNeta with keyboard shortcuts We continue to improve the accessibility of AppNeta's user interface by adding keyboard shortcut navigation for the top navigation menu and bulk action menus. See release notes for more details. [AppNeta SaaS 16.19 and 16.20]

New process for moving Monitoring Points between organizations The process for moving Monitoring Points between organizations has changed for physical and virtual Monitoring Point models. See release notes for more details. [EMP 14.1.0]

Stability and Security improvements We have made several improvements for stability and to protect against potential security vulnerabilities for physical and virtual Monitoring Point models. [EMP 14.1.0]

Manage Smart Lists via API We've added support for creating and updating smart saved lists via API. This is especially useful for adding large numbers of network paths to smart saved lists. [AppNeta SaaS 16.20]

Change to how packet captures relate to network paths We are removing the Related Network Paths feature from Usage monitoring. You will no longer be able to choose which network paths to associate packet captures with. Packet captures are now always associated with other network paths that use the same Monitoring Point. [AppNeta SaaS 16.20]
