CONFRONTING THE FINAL BARRIERS TO DIGITAL TRANSFORMATION

VALUE STREAM MANAGEMENT IS KEY TO FLOURISHING IN 2023

In recent years, digital transformation has become the singular strategy for surviving disruptive threats and an increasingly chaotic business landscape—yet stubborn challenges remain. Even after adopting new technologies and processes, companies still grapple with basic data visibility issues, inefficient processes, managing disparate teams and suppliers, and perhaps most critically, generating more value with fewer resources.

Value Stream Management (VSM) is the category of solutions designed to solve these problems. They accomplish this by modeling, measuring, and optimizing how plans, people, investments, and work efforts flow from concepts to become revenue-generating products and services. This guide offers help to executive, engineering, and transformation leaders on identifying the best VSM solutions to solve the most common organizational and process challenges that persist—or emerge—during your digital transformation journey.

WHY VSM IS A MISSING LINK IN DIGITAL TRANSFORMATION

DIGITAL TRANSFORMATION ITSELF CREATES CHALLENGES THAT DEMAND NEW WAYS OF WORKING, AND NEW CAPABILITIES TO FACILITATE THEM

We have seen a radical shift in everything from our broadest geopolitical and economic realities to how we deal with supply chains, processes and technologies at a company or even individual level. While digital transformation has emerged as the singular strategy to survive these challenges, even organizations that have been relatively successful at it continue to experience persistent problems in specific areas.

Operational awareness, strategic alignment, effective decision-making, and engineering efficiency have always been key components of success, but in today's environment, they are even more essential for business survival. As both a methodology and a technology platform designed to improve the above in a systematic and consistent way, Value Stream Management has gained widespread adoption and approval. Deployed well, VSM capabilities allow even the most complex organizations to reduce misalignment, waste, and poor operational visibility—and to do it faster and more sustainably.

WHY IS VSM CRUCIAL FOR DIGITAL TRANSFORMATION

VSM DEFINED

Value Stream Management is both a lean business practice and a set of software capabilities that enable companies to define, track, and optimize their end-to-end flow of value—from initial business objectives and plans through to the customer experience. With a complete VSM implementation, the entire enterprise can apply lean principles to its management and operations at every level. By constantly measuring both the value being generated by specific work efforts, and the costs in terms of money, time, and team effort, executives can make more insightful decisions and better investment choices, with a demonstrably higher success rates and ROI.

WHY NOW

These concepts have been around for decades, but several key forces have converged to raise both the stakes and the opportunities:

- **Digital transformation.** With most companies already well down this path, any weaknesses in visibility, alignment, and efficiency will have become very apparent. These are exacerbated by the pace of digital-first businesses, but can be offset by VSM capabilities.
- **DevOps and Agile maturation.** Engineering and delivery teams have made great strides, but disconnects remain between these disciplines and other roles such as executive leadership, product management, and support. VSM aims to bridge these gaps by creating a more inclusive flow that better reflects how value is created from concept to cash.
- **Technological innovation.** Deploying VSM in large enterprises has historically been difficult due to their scale. Advances in software capabilities now enable real-time visibility, insights, and work management that span hundreds or even thousands of teams.

PREPARING FOR TOMORROW

When organizations deploy value stream management techniques and technologies thoughtfully, they are well positioned to meet the demands of today's business environment.

As Agile and DevOps do their part in contributing to speed, scale, and agility, VSM adds the visibility and alignment needed to ensure that business decisions are well informed, so that the entire organization can focus on creating maximum value for the future.

In short, successful VSM implementations:

- **Ensure that actual customer value is at the center of all work**
- **Provide necessary visibility and insight to all roles, at all levels**
- **Optimize work to speed up the delivery of customer value**
- **Eliminate friction and waste due to misalignment**

“

Until recently, shortening time to market, tracking value delivered, or simply finding software delivery bottlenecks was a game of guesswork and hopeful iteration. **VSM changes that.**”

BETTER DIGITAL TRANSFORMATION: THE VSM ADVANTAGE

Beyond the individual contributions of DevOps and Agile to transformation, value stream management seeks to encompass the entire flow of work from initial prioritization and funding right through to the final customer experience. Along the way, dependencies, backlog items, risks, and of course ROI are all considered along with traditional velocity and flow metrics. The enterprise-wide alignment and consistency of VSM, from strategy to execution, is what can truly unleash the benefits of digital transformation.

THE FOUR ADVANTAGES OF VSM

By establishing a comprehensive, enterprise-wide approach to VSM, organizations can create the transparency, efficiency, and accountability required to deliver continuous business value. VSM can help them:

Improved Visibility

For executives, real-time operational awareness and end-to-end data aggregation from across the business lead to better business decisions. For delivery leaders, an accurate understanding of objectives, dependencies, risks, and changes mean more efficient processes and planning.

Organizational Alignment

VSM eliminates the chasm between planning intent and delivery outcomes with a common platform that fosters collaboration and a shared understanding of priorities, costs, and risks. This results in happier, more productive teams that understand how their work contributes to key outcomes.

Effective Investments

Digital transformation is turbocharged when data from every role contributes to prioritization, strategic investment planning, and digital product management. Executives have more confidence in their decisions, and results can be tracked and quantified in more meaningful ways.

Efficient Delivery

By establishing enhanced transparency and visibility, teams reduce bottlenecks and waste in their value streams to ensure they're building the right products at the right time, improving both speed and quality.

MEETING KEY 2023 ENTERPRISE CHALLENGES

VSM SHIFTS THE FOCUS FROM INDIVIDUAL TEAMS AND PROJECTS TO THE FLOW OF VALUE THROUGH PRODUCTS AND SERVICES DELIVERED ACROSS THE ENTERPRISE. THESE VALUE STREAMS FLOW HORIZONTALLY ACROSS TOOLS, TEAMS, AND DEPARTMENTS—AND WHILE THIS PRESENTS SIGNIFICANT CHALLENGES, IT'S WHERE THE TRUE VALUE OF VSM SHINES.

THE PROBLEM

Poor and
Siloed Data

Scalability
Limits

Outcome Gaps

VSM SOFTWARE SOLUTIONS

Segregated data from different teams, tools, and business units makes it hard to see how value is created across the enterprise—and impossible to do in real-time.

Aggregate and roll up data in meaningful ways to create real insights, so leaders at all levels can build trust, cultivate transparency, and ultimately make better decisions.

While traditional Agile tools are transformative at the team or program level, enterprises struggle to expand these efforts to the portfolio level with thousands of users—or even thousands of teams.

Enable complex organizations to model, measure, and manage plans, work efforts, and results from end-to-end across multiple value streams that span the entire enterprise.

The disconnect between leaders planning investments and those executing work creates misalignment in tools, nomenclature, and data—which ultimately leads to divergent outcomes.

Provide a way for leaders at all levels and in all roles to work within a consistent, integrated, and trusted framework that encourages transparency and collaboration to accomplish shared goals.

VALUE STREAM MANAGEMENT PLATFORMS: KEY REQUIREMENTS

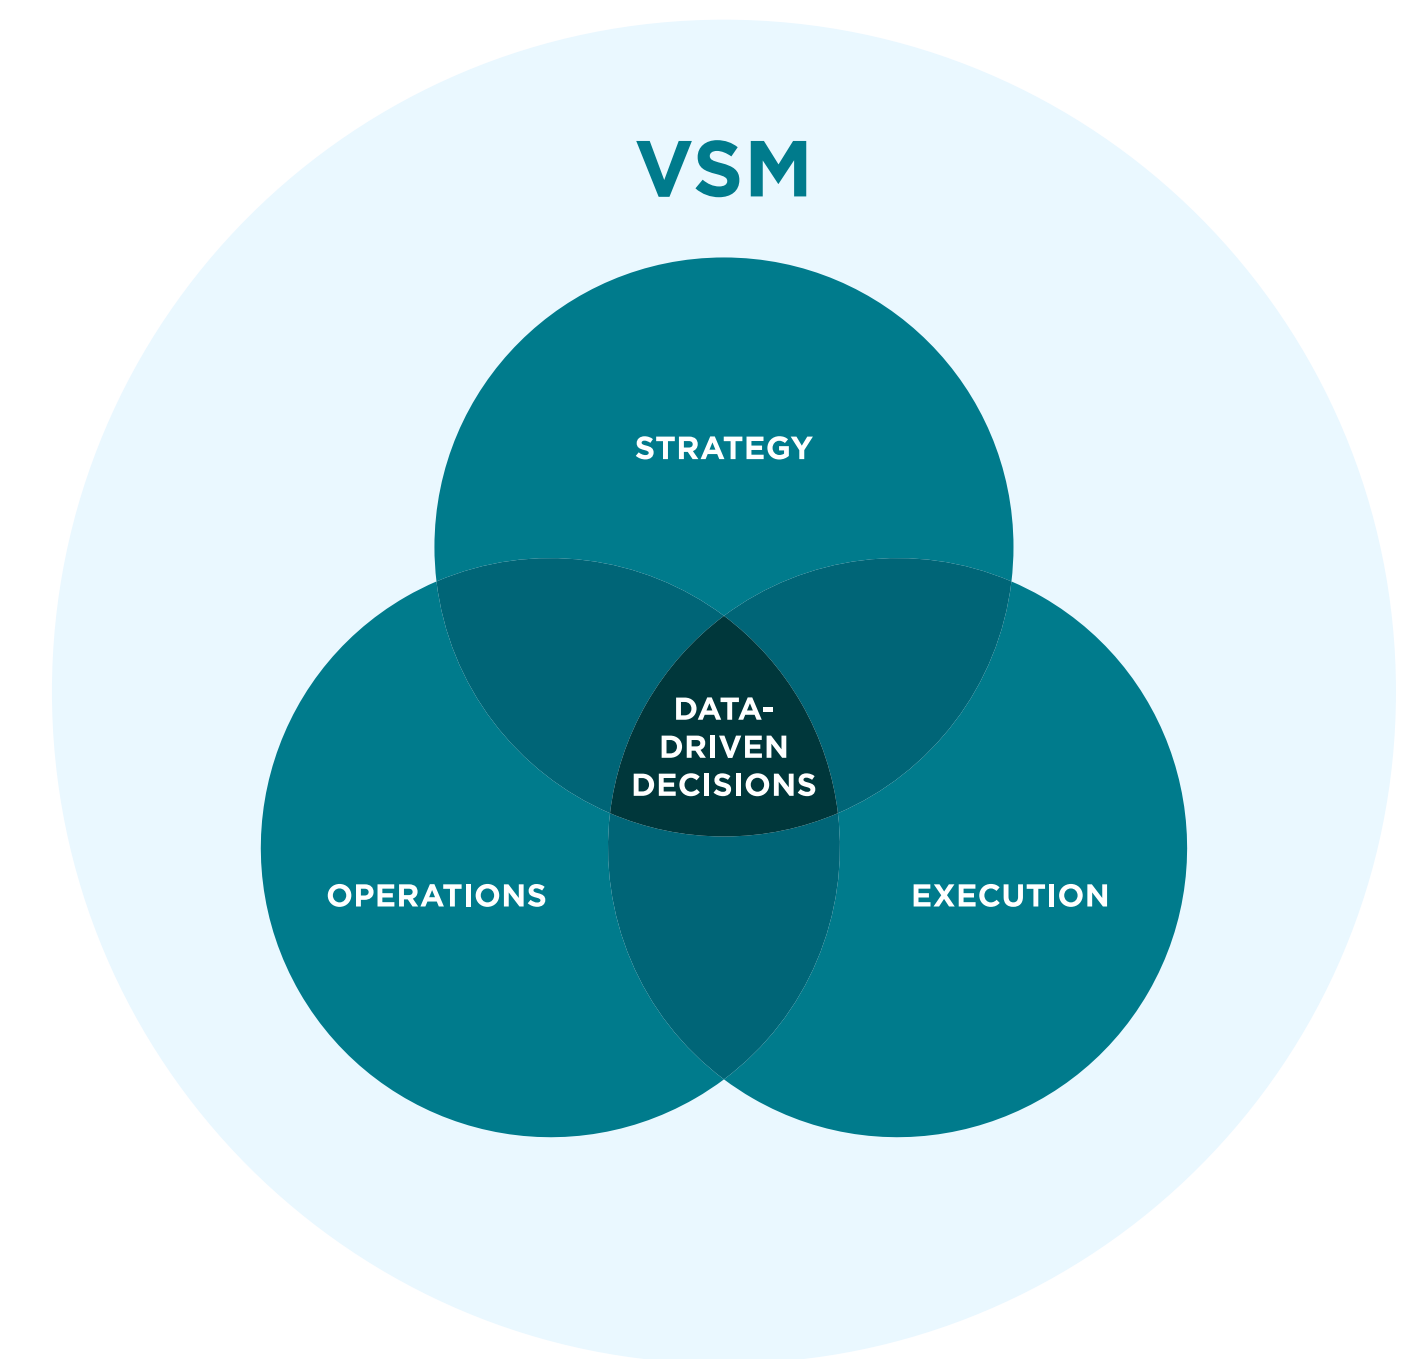

TO DEPLOY VSM SUCCESSFULLY, ENTERPRISES NEED A UNIFIED PLATFORM THAT CAN SUPPLY TRUSTED DATA FOR STRATEGIC INVESTMENT PLANNING, DEVELOPMENT, AND OPERATIONS ROLES. VSM CAN SUPPORT:

Strategic investment planning

Executives need capabilities that provide real-time insights into the performance of their priorities and investments, regardless of how they are being delivered, or by whom. They must be able to measure and report on the value being delivered by those investments so they can continue prioritizing based on value. Once these decisions are made, the VSM platform should aid these leaders in defining and articulating their initiatives in terms of their desired outcomes and key results.

Development and operations

Delivery leaders must manage teams efficiently, with a unified backlog that is continuously derived from strategic priorities. The right VSM platform offers them insight into the latest business goals and strategies, and a way to leverage these investment plans to direct their own Agile management efforts. During execution, they need end-to-end traceability across value streams, so they can provide the entire enterprise with better visibility into status, dependencies, risks, scope growth, and changes—which fosters trust and feeds back into strategic investment planning.

FOUR WAYS AN ENTERPRISE SOLUTION CAN DELIVER THE POWER OF VSM

01

FACILITATE CONSISTENT DEFINITION OF VALUE

When a leader prioritizes an initiative, they must establish and determine its value with crystal clarity. VSM platforms must support the definition, articulation, and modeling of customer value and measure it throughout the work lifecycle by:

- Breaking down the highest level of value into the specific work efforts that will become new products, services, and features.
- Helping teams effectively prioritize and plan efforts based on these value measurements.
- Tracking value from end-to-end and providing a real-time feedback loop that enables teams to determine whether value is actually being delivered.

02

SUPPORT THE ESTABLISHMENT OF REAL ROADMAPS

Innovation requires a strong product vision to ensure continued customer value creation. That can only be delivered when business planning incorporates innovations and articulates them in compelling roadmaps that include visualizations of that vision.

Many organizations establish a so-called “roadmap” by simply rolling up all work items into a single report. This practice means work might not be aligned with key value imperatives and doesn’t allow for innovation by the teams. VSM solutions need to enable all teams to define, manage, and view all types of roadmaps.

03

ALIGN THE ORGANIZATION WITH A UNIFIED DATA STRUCTURE

Transformational leaders are looking to break down the final barriers between their business, technology, and operations teams. VSM provides them with a single source of truth for strategies, outcomes, plans, and progress, so that all roles have a shared and consistent understanding of every factor. This transparency can only happen with a platform offering a unified data model so that:

- All departments and teams can deliver the same data to create relevant dashboards, eliminating the friction and overhead of constant status meetings and requests.
- Leaders can spot dependencies, risks, and bottlenecks at every level across organization.
- Executives can gain the insights needed to run the business more efficiently and effectively.

04

ALIGN THE ORGANIZATION WITH A UNIFIED DATA STRUCTURE

VSM goes beyond DevOps and IT to span the entire organization in each value stream. This end-to-end data enhances trust, and encourages better, more decentralized decision-making at all levels:

- Business leaders gain the real-time insights into their investment decisions so they can continually make trade-offs and refinements based on real value delivered.
- Delivery teams need a single backlog that is aligned with the business strategy and objectives, so they are always focused on optimizing their work to deliver maximum value.
- Business, delivery, and operations teams benefit from automated and continuous feedback loops that give them real-time operational awareness to understand how value is being created.
