## PRODUCT ANNOUNCEMENTS

**DX Application Performance Manager**

On March 20, 2023, the DX APM/AXA team announced availability of the latest Application Performance Management and App Experience Analytics releases. This release includes enhancements that extend product capabilities, usability and improve security compliance.

Highlights include:

- Alert Attributes with a direct, URL drill-down to the violating metric
- Case Insensitive Metric Specifier o Users can now enter the metric specifier value in the Metric View's search query in a case-insensitive manner
- Suppress Private Data to Define the trace suppression rules to identify users' sensitive data and replace it with pre-configured text
- Contextually sensitive embedded DX Dashboards in Metric View

You can find the Release Notes [here](#).

**DX Operational Intelligence**

Also on March 20, 2023, the DX Operational Intelligence team released the latest version of this AIOps and Observability solution. This release focuses on operator efficiency by improving notifications, automated actions and streamlined UI flows. In this update we also include significant capabilities for KPI based service observability through Service Level Indicators and Service Level Objectives.

The list of enhancements for Centralized Alarm Management and Service Observability is extensive. Highlights include:

- Leverage CI attributes including custom attribute for incident fields mapping, ticketing and notifications
- Customizations of alarm notifications delivered as HTML email messages
- Additional privileges in custom role definitions for Alarms and Situations to control user alarm actions
- Automate alarm actions (ex. alter severity, close, assignment) based upon alarm policies
- Simplified visual filter for All Alarms query interaction
- Updating specific fields in raw alarms using API
- Embed DX Dashboard in Service Analytics Service Details Page
- General availability of SLI/SLO
- Time zone support for SLO calendar window calculation
- Use metric attributes in SLIs and Monitoring Group
- Ternary and conditional expressions supported for SLI metric expressions

You can find the Release Notes for DX Operational Intelligence 23.1 [here](#).
