EVENTS & WEBINARS

Tech Day at Mohegan Sun, September 29, 2023

The Broadcom Tech Day will cover a wide variety of solution tracks that have been grouped into two categories: Agile Operations (NetOps and Value Ops) and Infrastructure Management & Security (AIOps & Observability, API Management, DevOps, Endpoint Management, and Identity Security).

The DevOps track will feature Martin Salgado, DevOps Strategist, sharing some of the key practices that enable testing to be truly continuous, followed by presentations on Service Virtualization, Test Data Manager and Agile Requirements Designer. All of these presentations are designed to help you automate the testing life cycle while balancing quality with velocity. As an added bonus, some of our key partners will be presenting how they can assist with implementation and support across all DevOps Products to further optimize the testing life cycle. Don't miss out on this unique opportunity. Register now!

Nolio Webinar, September 21, 2023, 11:00am ET

Join Assaf Shlomi, Product Manager for Nolio, as he shares about Nolio and its Enterprise-Grade Features.

Learn how Nolio helps to resolve many enterprise challenges such as:

- Ensuring that hundreds of deployments use the right build in the right environment.
- Protecting the production environment.
- Doing it one time the right way.

You will also learn how Nolio provides the ability to do repeatable deployments using templates and deployment plans to create standard deployments across all applications. This is known as the "Shared Components" concept. We hope you will join us for this webinar.

Go from Continuous Delivery to Accelerated Delivery of your Digital Projects, June 29, 2023

Be sure to watch the recording of the webinar that was held on June 29, led jointly by Martin Salgado, Solution Strategist at Broadcom, Ramandeep Bhurjee, Vice President at Cigniti and Katie Norton, Senior Research Analyst at IDC. This webinar outlines how technology strategists and practitioners alike can find predictable routes to successfully implement digital transformation projects.

TDM on the Mainframe, July 27, 2023

Be sure to watch the recording of the webinar that was held on June 27, led by Satya Mohanty, Client Services Consultant at Broadcom for TDM, as he explains how TDM allows users to apply Test Data Management practices directly on the mainframe, reducing the reliance on slow, expensive Extract, Transform and reload technologies to ensure compliance and take advantage of fit-for-purpose test data.

Product Announcements

Service Virtualization: Introducing Service Packs

With 10.7.2, we have introduced a new patching process to receive any support fixes that are available. For cumulative vulnerability remediations and defect fixes, customers can apply the latest service pack. Rather than request support for the latest service packs, we will be posting the updates on this page. Having a single page to pull patches should make it easier to manage your environment and access the latest support and security fixes as needed.

Agile Requirements Designer 3.4, upcoming release

We're excited to offer you a preview of what's to come for Agile Requirement Designer 3.4, which includes several valuable new features. One notable feature is the ability to store automation configurations in the ARD Hub, simplifying collaboration and centralizing management. In addition, ARD 3.4 introduces auditing of ARD Hub operations, increasing transparency. We have also worked to speed up the solution and optimize data. In addition, ARD 3.4 will include several other enhancements aimed at streamlining processes and increasing overall productivity. Stay tuned for the official release announcement coming out in the next quarter.

Blogs & Assets

"How ARD Helps DevOps Realize Its Full Potential", Blog by Sachin Srivastava, Client Services Consultant with Broadcom

Around two decades ago, organizations began turning to agile methodologies like Scrum, Kanban, and Lean in a bid to improve their development processes and deliver better software products faster. The advent of agile approaches has indeed proved to be a boon for software teams as they respond to the changing needs of projects and stakeholders.

"The Roadmap to Accelerated Delivery: Harnessing DevOps and Continuous Delivery for Digital Projects", Blog by Cigniti, Strategic Partner with Broadcom

Software testing has been an established discipline as old as software development itself. We have seen significant evolution of testing practices recently, specially driven by Continuous Delivery and DevOps, where testing is increasingly integrated with agile development and other software lifecycle practices.
